

This explanation describes the software's general behaviour across reference patients and helps answer the following question:

How does the average diabetes risk score change as each patient measurement increases?

Main takeaway: as the four patient measurements increase, the average diabetes risk

How to read it: Each chart changes one measurement or characteristic at a time. The highlighted point marks the recorded value.

Assessment note: the visual below is another representation of the same explanation content. Judge the information conveyed, not the visual design.

Vertical axis: Average diabetes risk score (0 to 100)

Displayed range: 5 to 60

HbA1c

Strong upward trend: the average diabetes risk score rises sharply as HbA1c increases.

Fasting blood glucose

Strong upward trend: the average diabetes risk score rises sharply as fasting blood glucose increases.
