

This explanation describes the software's general behaviour across reference patients and helps answer the following question:

Which combinations of patient measurements stand out most, and are they associated with higher or lower diabetes risk scores?

Main takeaway: the strongest pattern shown is HbA1c at or above 6.0% together with

How to read it: The ranked cards run from the strongest pattern to the weakest pattern in this summary.

Assessment note: the visual below is another representation of the same explanation content. Judge the information conveyed, not the visual design.

#1

Strongest pattern

Higher scores

HbA1c $\geq$ 6.0%

fasting blood glucose $\geq$ 110 mg/dL

#2

Second strongest

Lower scores

HbA1c $<$ 5.7%

fasting blood glucose $<$ 100 mg/dL
