

Independent technical expert memo

For the legal assessor; separate from the applicant-facing explanation.

Property rating scale 1: lowest · 3: midpoint · 5: highest

Ratings are ordinal, literature-informed comparisons of the method profiles. They are not case-specific measurements, probabilities or legal-compliance scores.

FAITHFULNESS

Legal relevance: These properties bear on whether the applicant receives a technically accurate account of the model information being presented.

01

Necessity / no false positives: does the explanation include only influences that truly affect the model output?

3/5

Moderate

FINDING

Sampling adds estimation error, but even exact coalition allocation is not a generic feature-necessity certificate. A neutral rating is appropriate, tied with exact the method on this property; numerical accuracy and decision relevance must be evaluated separately.

02

Sufficiency / no false negatives: does the explanation avoid omitting influences that affect the model output?

3/5

Moderate

FINDING

Sampling and regularization may suppress effects; exact allocation can also yield zero for a decision-relevant feature. A neutral rating is appropriate, tied with exact the method for generic contributor recall, without claiming equal numerical estimation accuracy.

03

Completeness / coverage: how much of the relevant model or decision rationale is covered?

3/5

Moderate

FINDING

Local reconstruction does not establish full explanatory coverage.

ROBUSTNESS

Legal relevance: These properties bear on whether the explanation remains dependable rather than changing for irrelevant reasons or explainer choices.

04

Stability / continuity: do similar or slightly perturbed inputs receive similar explanations?

2/5

Limited
